## INTRODUCTION

This volume is the eighth pregnancy report for North Carolina. The data of this report include reported induced abortions, live births, and fetal deaths. Only fetal deaths of 20 or more weeks gestation are reportable. The sum of these events represents total reported pregnancies.

The following section uses tables, graphs, maps, and narrative to examine statewide trends and patterns in pregnancy, live birth, abortion, and fetal death. Subsequent sections of this report examine selected characteristics of abortions, live births, and fetal deaths with emphasis on abortions since they are not reported in other publications of the State Center for Health Statistics. Finally, for the state, regions, and 100 counties, one-page tables summarize resident abortions, live births, fetal deaths and total pregnancies by race and age for total and unmarried women. **Note that marital status was not reported for 21 percent of the abortions.** Therefore the number of abortions to unmarried women is understated in the tables of this report.

Throughout this report, data year 1986 is used as the base to reflect changes during the past decade. Beginning in 1978, abortion providers voluntarily reported detailed characteristics on nearly all of their procedures. Corresponding data for earlier years were obtained from a sample and may not be representative.

Hospitals and clinics in North Carolina reported detailed information on an estimated 99 percent of all abortions performed in 1996. For those facilities not reporting 100 percent, the characteristics data have been expanded in a random manner to produce data for each facility's total number of abortions. These adjustments should not seriously bias the results. For live births and fetal deaths, reporting of the events is believed to be virtually 100 percent, although the variables include a few unknown or not stated values.

For the maps of this report, a procedure from the Statistical Analysis System (SAS) was used to group counties that are "most like each other" with respect to the statistic being examined. This procedure may result in very large or very small groups, depending on how the counties differ.

It is hoped that this report will serve many of the data needs of those individuals and agencies delivering and/or planning health services for the childbearing population of the state. Your comments are always welcomed. You may contact this office at (919) 733-4728, or address correspondence to:

## TRENDS AND PATTERNS IN PREGNANCY, LIVE BIRTH, ABORTION, AND FETAL DEATH

Total and race-specific measures for each year 1986-1996 are listed in the table below. North Carolina's total *pregnancy rate* (pregnancies per 1,000 females ages 15-44) has increased for the first time after five consecutive years of decline. The increase includes both whites and nonwhites. Live births are the greatest contributor to total pregnancies, so it is not surprising that the state's *fertility rate* (live births per 1,000 females ages 15-44) has followed the same general course as the pregnancy rate. There was a 2.1 percent increase in the total fertility rate from 1995 to 1996.

The state's *abortion rate* (abortions per 1,000 females ages 15-44) continues to decline for whites with a decrease of 2.3 percent from 1995 to 1996. The nonwhite abortion rate increased 5.3 percent from 1995 to 1996. The *abortion fraction* (abortions per 1,000 pregnancies) decreased among whites by 4.1 percent from 1995 to 1996 and increased among non-whites by 3 percent. The final component of total reported pregnancies is the relatively small number of fetal deaths. In 1996 the overall *fetal death rate* (fetal deaths per 1,000 deliveries) increased by 12.5 percent from 1995 to 1996.

### Pregnancy Rates, Fertility Rates, Abortion Rates, Abortion Fractions and Fetal Death Rates: North Carolina Residents, 1986-1996\*

	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996

<b>Fetal Death Rate</b>											
Total	8.8	8.6	8.9	8.7	8.6	8.6	9.0	8.4	7.9	8.0	9.0
White	7.1	7.4	6.7	6.6	6.5	6.7	6.6	6.1	5.6	5.8	7.0
Nonwhite	12.5	11.3	13.4	13.0	13.3	12.5	14.1	13.3	13.0	13.2	14.0

\*Pregnancy, fertility, and abortion rates for 1986-1989 are not the same as published in some previous reports due to revised population estimates. In almost all cases, the updated total and white rates are slightly lower and nonwhite rates are slightly higher than rates previously published.

On pages 2-3 through 2-20, maps and tables show county-specific pregnancy, fertility, and abortion rates, as well as abortion fractions for 1996. Fetal death rates are not given due to the instability of the county rates for a single year. Users are referred to the five-year fetal death rates published in *North Carolina Vital Statistics, Volume 1*.

## SUMMARY OF CHARACTERISTICS OF INDUCED ABORTIONS

During 1996, the licensed facilities of North Carolina reported 33,554 abortions to the State Center for Health Statistics, an increase of 0.4 percent from the number reported in 1995. As in previous years, women obtaining these abortions were most often white, between the ages of 15 and 24, and not married. Most had never had a previous abortion and had no living children. Tables and graphs on the following two pages show the number of resident and occurrence abortions by county for 1996.

### Place of Occurrence

The table on page 3-3 details 1996 North Carolina occurrences according to region and county of occurrence. Of the 33,554 abortions reported in North Carolina, 99.8 percent occurred in 10 counties. Twenty-three percent of the state total occurred in Mecklenburg, 23 percent occurred in Wake, and 14.5 percent occurred in Orange.

In 1996, a total of 659 or 2.2 percent of North Carolina resident abortees received abortions in other states. Of these, 53 percent occurred in Virginia, 20 percent occurred in South Carolina and 19 percent occurred in Georgia. The remaining eight percent occurred in Kansas, Kentucky, Missouri, Mississippi, New Mexico, Vermont, Washington, and Tennessee.

### Place of Residence

During 1996, abortions to residents of North Carolina totaled 30,593, an increase of two percent from 1995. The distribution by county of residence varied widely during 1996 with all 100 counties represented. The most populous counties accounted for the greatest frequencies, as shown on the graph on the following page.

Among abortions performed in 1996, a total of 3,633 (10.6%) were to residents of other states. Of these, 54 percent were residents of South Carolina and 34 percent were residents of Virginia. Tennessee accounted for 5 percent of North Carolina's nonresident abortions; Georgia, 2 percent; and Maryland, 0.5 percent.

### Facility of Occurrence

In 1996, 29 hospitals performed only three percent of abortions occurring in North Carolina. The remaining 97 percent occurred in 25 non-hospital facilities. Almost half of the hospital abortions occurred in one hospital.

## SELECTED CHARACTERISTICS OF RESIDENT LIVE BIRTHS AND FETAL DEATHS

### LIVE BIRTHS

There was a slight increase in the absolute number of live births from 1995 to 1996, but an overall increase of 16 percent since 1986 to 104,428 resident live births in 1996. Here we examine several live birth trends that cause particular public health concern because of possible economic, emotional, and health consequences to the mother/child. Several other publications available from this office offer more detail about live births and their maternal and medical characteristics. Region, county, and some city data are also available.

## FETAL DEATHS

This section examines trends in white and nonwhite fetal death by race and maternal age. Race-specific fetal death rates for regions, counties, and cities are available in *North Carolina Vital Statistics, Volume 1*. Counties are urged to use 5-year fetal death rates, rather than the less stable single-year rates.

### Race

Following are the numbers of resident reported fetal deaths by race from 1986 to 1996.

#### Resident Fetal Deaths by Race North Carolina, 1986-1996

YEAR	TOTAL	WHITE	NONWHITE
1986	800	440	360
1987	814	477	337
1988	872	443	429
1989	899	455	444
1990	911	463	448
1991	884	465	419
1992	948	471	477
1993	861	424	437
1994	808	397	411
1995	823	418	405
1996	952	517	435

### Maternal Age

Because of the instability of the fetal death rates by race and age, they are not graphed here. However, the table below points to the higher rates among mothers age 35 and older as well as among nonwhites.

#### Fetal Death Rates by Age and Race North Carolina, 1986-1996

## SUMMARY OF REPORTED PREGNANCIES

- ▶ In 1996, 30,593 induced abortions were performed to residents of North Carolina, an increase of two percent from 1995.
- ▶ A total of 3,633 (10.6%) of abortions performed in North Carolina were to residents of other states.
- ▶ The average age of North Carolina residents having abortions during 1996 was 24.8. The percentage of abortions at younger ages has continued to decrease since 1986.
- ▶ The highest abortion rate occurred to women ages 20-24. The abortion fraction was highest among women ages 15-19.
- ▶ Of the resident abortions reported in 1996, 51.1 percent were white and 46.7 percent were reported as nonwhite.
- ▶ Only 18.4 percent of North Carolina residents receiving abortions during 1996 were reported as being legally married. However, 21 percent of abortion records in 1996 had marital status not reported.
- ▶ The average education level of residents receiving abortions during 1996 was 12.7 years. Fifty-eight percent had at least 12 years of education, compared to 69 percent during 1986.
- ▶ Thirty-eight percent of North Carolina women having abortions during 1996 reported at least one previous abortion.
- ▶ In 1996, the percentage of women obtaining abortions beyond the 20th week of gestation was 0.4. The average gestational weeks of pregnancy was 8.7 in 1996.
- ▶ Suction curettage accounted for 89.5 percent of all resident abortion procedures reported for 1996, a decrease from 96.4 percent in 1995. The decrease was particularly due to the addition of dilation and evacuation as a reportable procedure.
- ▶ There were 104,428 live births reported to residents of North Carolina in 1996, an increase of 16 percent from 1986.
- ▶ The percent of newborns at low birthweights has not declined. The percentage weighing less than 2500 grams remained at 8.7 in 1996. The percentage of very low-weight births (less than 1500 grams) remained at 1.8.
- ▶ Births to mothers with no prenatal care accounted for one percent of all live births.
- ▶ The fetal death rates for whites and nonwhites age 35 and older increased 21 and 1.1 percent respectively from 1995 to 1996.

## DEFINITIONS

<i>Abortee</i>	A woman who has received an abortion.
<i>Abortion Fraction</i>	The number of induced abortions per 1,000 reported pregnancies (live births + fetal deaths of 20 or more weeks gestation + induced abortions).
<i>Abortion Rate</i>	The number of induced abortions per 1,000 females of specified age.
<i>Age</i>	Age at last birthday.
<i>Clinic</i>	A freestanding facility, neither physically attached to nor operated by a licensed hospital, for the performance of abortions.
<i>Dilation and Evacuation (D &amp; E)</i>	This procedure, used most frequently in the second trimester, involves opening the cervix (dilation) and using primarily sharp instrument techniques, but also suction and other instrumentation such as forceps for evacuation.
<i>Education</i>	The number of years of schooling completed.
<i>Fertility Rate</i>	The number of live births per 1,000 females of specified age.
<i>Fetal Death</i>	Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, as indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles (definition adopted by World Health Organization in 1950). <b>Consistent with required reporting, this report includes only fetal deaths resulting from pregnancies of 20 or more weeks gestation.</b>
<i>Fetal Death Rate</i>	The number of fetal deaths per 1,000 live births plus fetal deaths.
<i>Gestation</i>	Weeks of pregnancy as computed from date of last menstrual period.
<i>Gestational Age</i>	The age of the fetus in weeks.
<i>Hysterotomy/ Hysterectomy</i>	Hysterotomy involves surgical entry into the uterus, as in a cesarean section, that removes a fetus that is too small to survive even with extraordinary life support measures. It is usually performed only if other abortion procedures fail. Hysterectomy is a procedure in which the uterus is removed either with the fetus inside or after the fetus has been removed. It is usually performed only when a pathological condition of the uterus, such as fibroid tumor, warrants its removal or when a woman desires sterilization.
<i>Induced Abortion</i>	The purposeful interruption of pregnancy with the intention other than to produce a live born infant or to remove a dead fetus and which does not result in a live birth.

<b><i>Intra-uterine Instillation</i></b>	This procedure involves either withdrawing a portion of amniotic fluid from the uterine cavity by a needle inserted through the abdominal wall and replacing this fluid with a concentrated salt solution (known as saline instillation, saline abortion, or saline amniotic fluid exchange) or injecting a prostaglandin — a substance with hormonelike activity — into the uterine cavity through a needle inserted through the abdominal wall (known as intra-uterine prostaglandin instillation). The saline instillation process induces labor, which results in the expulsion of the usually dead fetus approximately 24 to 48 hours later. The interval between prostaglandin injection and expulsion tends to be shorter than in a saline abortion.
<b><i>Live Birth</i></b>	The complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached (definition adopted by World Health Organization in 1950).
<b><i>Living Children</i></b>	The number of children still living at the time of this event.
<b><i>Low Birthweight</i></b>	Liveborn infants who weigh under 2,500 grams (5 pounds, 8 ounces or less) at birth, regardless of the period of gestation.
<b><i>Maternal</i></b>	Of or pertaining to the mother.
<b><i>Married</i></b>	Includes women living with a husband and those who are separated but not legally divorced. In the case of live births and fetal deaths, the term also includes mothers who have been legally divorced 280 or fewer days.
<b><i>Medical (Nonsurgical)</i></b>	This nonsurgical procedure involves the administration of a medication or medications to induce an abortion. Medications (e.g., methotrexate, mifepristone, misoprostol, etc.) are used most frequently early in the first trimester of pregnancy. However, some medications (e.g., prostaglandin suppositories, injectable prostaglandins, etc.) may also be administered during the second trimester of pregnancy to induce abortion. Medications may be administered orally, by injection, or intra-vaginally.
<b><i>Not Married</i></b>	Includes women who are widowed or divorced and those who have never married. In the case of live births and fetal deaths, widowed or divorced includes only mothers who have been widowed or legally divorced for more than 280 days.
<b><i>Occurrence</i></b>	The facility, county, region, or state in which the event occurred.
<b><i>Perinatal</i></b>	Occurring at about the time of birth.
<b><i>Pregnancy Rate</i></b>	The number of pregnancies per 1,000 females of specified age.
<b><i>Prenatal</i></b>	Occurring, existing, or taking place before birth.
<b><i>Previous Abortions</i></b>	The number of previous induced abortions the abortee has had. The current procedure is not included.

<b><i>Race</i></b>	Two broad categories, "white" and "nonwhite," are used. "Nonwhite" is predominantly Black (>90%) in North Carolina.
<b><i>Residence</i></b>	The usual county, region, or state of residence of the pregnant woman.
<b><i>Retained Products</i></b>	Fetal tissue that may remain in the uterus after an abortion.
<b><i>Sharp Curettage</i></b>	A procedure that involves the dilation of the cervix as in suction, although usually to a larger diameter. The fetal and placental tissues are then scraped out with a curette, which resembles a small spoon.
<b><i>Suction Curettage</i></b>	In this procedure the cervical canal is dilated by the successive insertion of instruments of increasing diameter. When the opening is large enough, a flexible tube is inserted into the uterine cavity and the fetal and placental tissues are then suctioned out by an electric vacuum pump.
<b><i>Very Low Birthweight</i></b>	Liveborn infants who weigh under 1,500 grams (3 pounds, 4 ounces or less) at birth, regardless of the period of gestation.
